
a. where each step sits
b. one square of two equal steps, from the centre
$g = \sinh^2(\ln z/2)$
$\ln z$ (step between neighbouring masses)
neutrino step
m_3/m_2
$d \to s$
$s \to b$
$\mu \to \tau$
$c \to t$
$e \to \mu$
$u \to c$
run (leaves)
wall $g = 1$: $z = 3 + 2\sqrt{2}$, $\Gamma^2 = 1/2$
turn (held)
neutrino step, current data: one square
$\mu \to \tau$ step: one square
neutrino step: the square repeated
fixed point of the turn
